Rockville, MD 20852

**RE: Importation of Prescription Drugs Proposed Rule, Docket No. FDA–2019–N–5711**

Dear Commissioner Hahn:

Thank you for the opportunity to provide comments on the Food and Drug Administration’s proposed rule on importation of prescription drugs. I am providing these comments on behalf of the Massachusetts Independent Pharmacists Association, a group representing independent community pharmacists in Massachusetts. Independent community pharmacists have an obligation to ensure that medications are safe, effective, high quality, and authentic. The FDA drug approval process and the secure, closed drug distribution system in the United States provide assurances that fulfill this obligation. FDA’s proposed drug importation program introduces unnecessary risks to patient safety and threatens our members ability to optimize medication outcomes, as these products are not distributed with the same safeguards as those products distributed in the US. The proposed program is also unlikely to result in a significant reduction in the cost of prescription drugs to the American consumer. I am writing to request that this proposed rule not be finalized.

**The proposed importation program jeopardizes patient safety.**

The proposed program bypasses important drug supply chain protections that were created to ensure that the drugs we provide to patients are safe. It creates drug supply chain gaps and vulnerabilities where counterfeits and other unsafe drugs could be introduced. This program would undermine the Drug Supply Chain Security Act (DSCSA), which ensures a closed supply chain to track and trace prescription drugs as they move from manufacturer to distributor to the pharmacist. These same safeguards do not exist in Canada. FDA’s proposed rule creates a patchwork of interim supply chain measures that introduce gaps and loopholes in the supply chain as drugs are distributed from Canada into the U.S. Our member pharmacies have invested time and money to put DSCSA systems in place, and the proposed rule creates a disincentive for

further investment and compliance, especially for those pharmacies who are already financially constrained. Our members want to be able to reassure their patients that the drugs they are taking are safe, effective, high quality, and authentic. They cannot do that if there are drugs that are able to bypass DSCSA protective measures.

**The proposed importation program is unlikely to produce significant cost savings to American consumers.**

High drug costs are a significant problem for American consumers, and our members see the negative outcomes of that problem every day. They are committed to finding solutions for patients to ensure they have access to the medications they need, and we will continue to advocate for changes that we believe will have a real impact on lowering drug prices. FDA's proposed importation program is not a workable solution to lowering drug costs. Most of the highest-cost drugs for American consumers are carved out of the program, such as insulin and other biologics. For the drugs that are included in the proposed program, the additional costs associated with relabeling, testing, complying with the DSCSA workaround, and developing recall and adverse event reporting systems for the imported drugs would outweigh any cost savings realized from purchasing the drugs from Canadian rather than U.S.-based sellers or distributors.

In conclusion, I urge you not to finalize the proposed rule on importation of prescription drugs. The risk to patient safety, combined with the lack of cost savings, makes this proposal an unworkable solution for patients and for American consumers in general.

Thank you for your time and consideration.

Sincerely,

A handwritten signature in cursive script that reads "Todd Brown".
