

The Safe Medicines

119th Congress / 2025 Policy Agenda

Because American patients enjoy the safest drug supply in the world, they're sometimes unaware of the dangers that patients in other countries navigate when it comes to the risk of counterfeit or unapproved medicines. PSM educates patients, supports the regulators and law enforcement who keep us safe, and shapes safer state and national policies to protect the drug supply.

Raising patient awareness

Teaching patients about illegal online pharmacies

Raising awareness of counterfeit products, their victims, and the criminals behind them

Educating patients about the risks of non-FDA-approved medicines

Ensuring safety for the supply chain

Educating patients and healthcare professionals about the Drug Supply Chain Security Act

Raising awareness about crime on online pharmacy marketplaces

Illegal and unsafe international medicine trade

Raising awareness about illegal alternative funding programs;

Enhancing pharmaceutical border security through customs reform

Ending the fake pill / fentanyl trade

Support criminalization of fentanyl analogues and illegal pill presses

Policies that endanger the supply chain

Foreign drug importation: tracking proposals and programs to show their safety issues

Prescription drug affordability boards: tracking proposals that will harm pharmacies and limit patient access to treatment

Pharmacy benefit manager business practices that endanger patients

Regulating online venues where medicines may illegally be sold

Ensuring that online marketplaces are safe when selling products related to health and safety

Ensuring that social platforms share user reports of drug dealers with law enforcement
